

What NOT to do with your Biohazard Waste

Don't overfill – dispose of when $\frac{3}{4}$ full

Don't let ANYTHING go past a fill line on sharps or hang out of containers

Make sure lids close all the way and containers are big enough for what you are disposing

Make sure nothing is stacked on top of a biohazard container

Make sure the bag does not obscure any biohazard labels on the bin; make sure bag is the right size for container
